

Power Query to Power BI: a complete working lab

Connect to live CSV files in GitHub, turn intentionally messy operational data into a dependable star schema, build a decision-ready report, and release it through Power BI US Government.

4 guided labs About 2 hours Power BI Desktop + Service No prior DAX required

Lab path

Before you begin

- Install the current Power BI Desktop release.
- Confirm you can reach raw.githubusercontent.com (<https://raw.githubusercontent.com>).
- Create a blank Power BI report.
- For Lab 4, obtain a government Power BI Pro or PPU license and approved workspace access.

What success looks like

- 120 budget rows, 20 purchase orders, and 5 programs.
- Two single-direction, one-to-many relationships.
- Zero Power Query errors.
- Three report pages published and refresh-tested in Power BI US Government.
