Activity Outcome

Share your report from Power BI Desktop to the Power BI Service

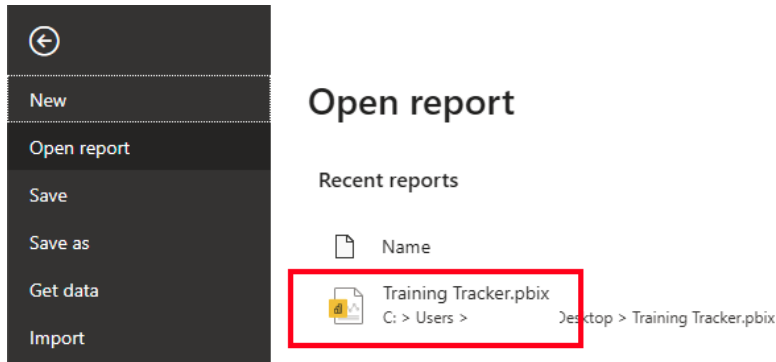

Activity Guide 3: Publishing and Sharing your Reports to the Power BI Service

This activity walks you through creating a simple Training Tracker report with several visuals using data from an Excel file using Power BI Desktop.

Publish your Report to the Power BI Service

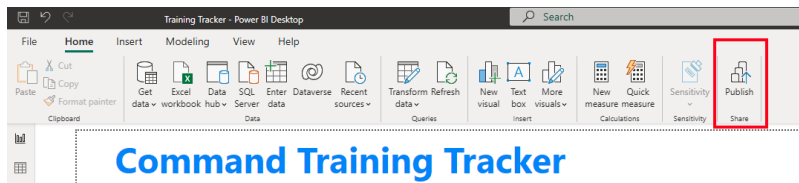

Open your Report

1. If not already open, click on **File**, then **Open report**. Open your **Training Tracker.pbix** file

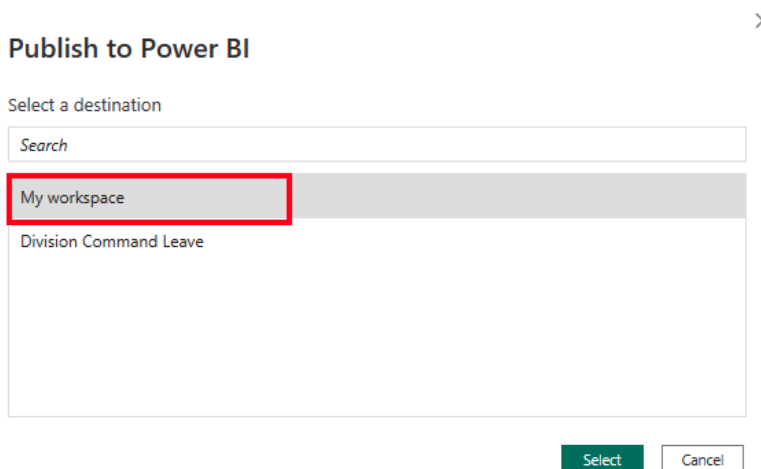

Publish your report

1. From the *Home* Menu, click on **Publish**

2. In the *Publish to Power BI* popup window, select **My Workspace**, then click **Select**

The Report will be uploaded to the *My Workspace* in the Power BI Service.

3. Click on **Open Training Tracker.pbix in Power BI** to see your report in the service.

Publishing to Power BI

✓ Success!

[Open 'Training Tracker.pbix' in Power BI](#)

Get Quick Insights

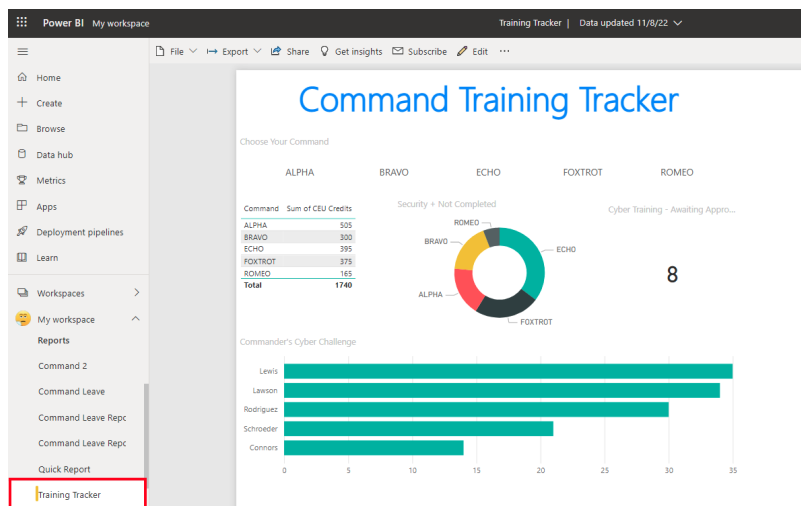

Did you know?

You can create a portrait view of your report, tailored for mobile phones. On the **View** tab, select **Mobile Layout**. [Learn more](#)

Got it

The Power BI service will open in a web browser to your Training Tracker report in all its glory.

If it does not launch directly, it will be available under *My Workspace* and *Reports*.

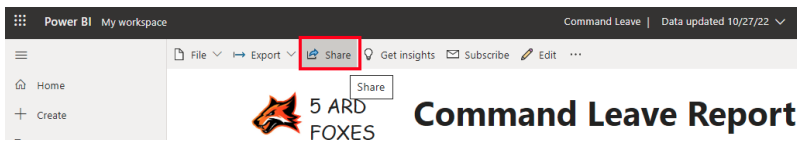

Share Your Report

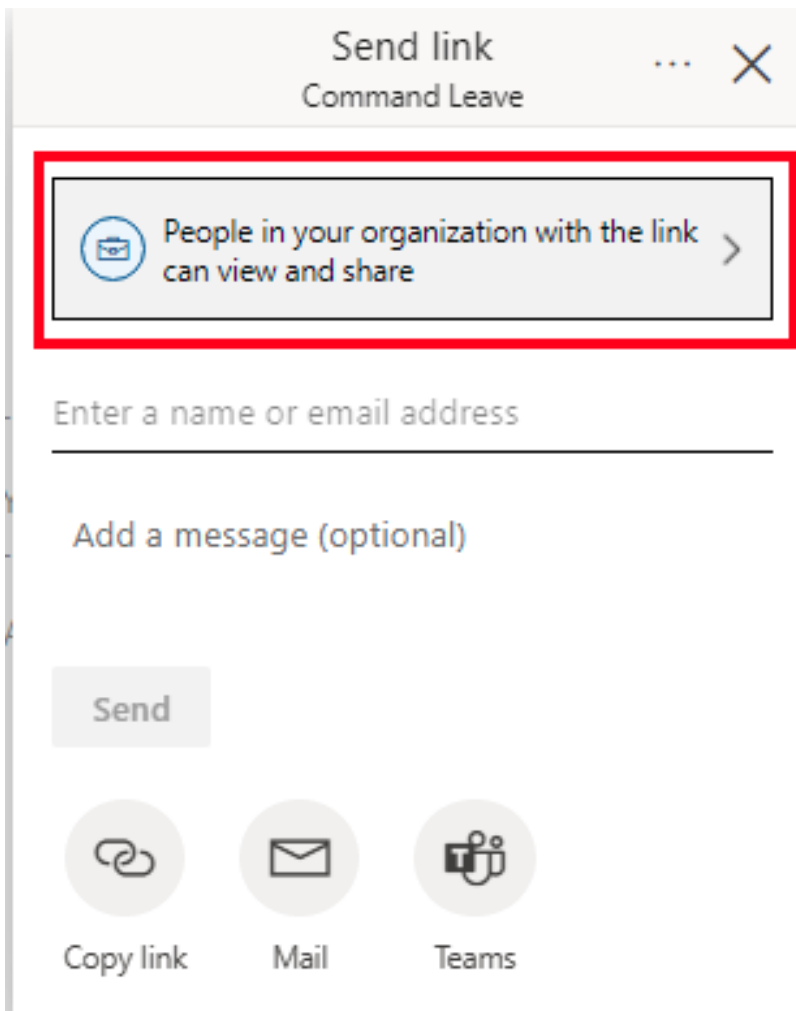

You've gone through all of the hard work to create your Power BI Report, let's show it off. In this activity, we will share one of the reports you have created with someone in the class, or by creating just a link to use later. Your choice.

 You can use either report, but we will show the Command Leave Report in the examples),

1. In the Power BI Service, in the Main Menu, click on **Share**

2. A *Send Link* popup window will open. Click on **People in your organization with the link can view and share**

3. In the *Who would you like the link to work for?* window, Click **Specific people**

Since this report (*hypothetically*) does contain PII (Personally Identifiable Information) we don't want to share it with everyone, just the important people authorized access to this data. *The sample data is not PII and is just random names and data.*

4. Under *Settings*, uncheck **Allow recipients to share this report**, then click **Apply**

Send link

Command Leave

Apply

Cancel

5. In the **Enter a name or email address** field Choose someone in your organization (in our case a fellow classmate, or even yourself)

Then, add a descriptive message to inform the person what this report is. They will get a link to view it in the email.

Enter a name or email address

Here is the Command Leave Report you requested

Send

Copy link

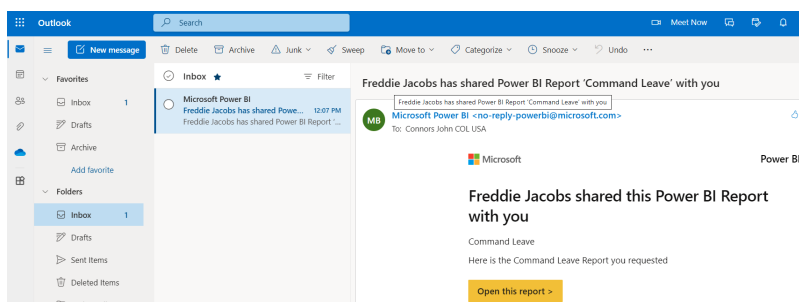

Mail

Teams

You can also choose to *copy the link*, *generate an email* or send the link via a *Teams message*. You will need to do that before you hit *send*.

6. Click **Send**

Have the recipient check their mail. It will be from **Microsoft Power BI (no-reply-powerbi@microsoft.com)**

The other recipient should not be able to re-share your report with anyone who does not already have access. If they do try to share, the options to share should be greyed out. Even with Copy Link, the link will not work for anyone other than those who already have access.

Great work! At this point, you have created a Report in Power BI, then successfully published it to the Power BI Service. After that, you shared it with a colleague with the ability to share it with others disabled.

This is only the very beginning of your journey to becoming a Power BI Pro. We encourage you to keep using the service, keep creating, and see how you can help "make your data talk" visually and securely.

For more tutorials on Power BI or other Microsoft Technologies, visit <https://learn.microsoft.com> .

Ask your Microsoft representative how you can learn even more about Power BI with our more advanced Power BI offerings. We can even help you design and create complex reporting and data warehousing!

THIS COMPLETES ACTIVITY #3
