REPORT

LAB 2 • DATA PREPARATION

Transform the data and build the model

Clean by meaning, not appearance. Preserve real negatives and percentages, remove only invalid records, and connect the tables with a predictable star schema.

35–40 minutes Power Query + Model view Deliverable: validated model

Transformation order

Remove invalid rows

Trim + standardize

Apply locale types

Validate counts

Relate tables

Order matters: remove rows that do not belong before spending time converting and correcting their values.

1. Budget vs Actuals

Source text

"(\$120,000)" * 6.00% * N/A

Typed result

-120000 * 0.06 * null

Promote the source headers

1. If the columns are named Column1, Column2, and so on, select **Home** → **Use first row as headers**.
2. Confirm the first headers are Program ID, Program Name, Fiscal Year, and Quarter.
3. Apply the same step to Program and Purchase Orders if their headers were not promoted during import.

The screenshot shows the Power Query Editor window. The 'Home' tab is selected, displaying various data transformation options. The 'Queries' pane on the left lists three queries: 'Budget vs Actuals', 'Program', and 'Purchase Orders'. The main area shows a data table with the following columns and rows:

	Program ID	Program Name	Branch	Contract Number
1	PRG-001	Thunderbolt Sustainment Support	Air Force	FA8101-24-C-00...
2	PRG-002	Cyber Defense Initiative	Army	W91CRB-24-C-0...
3	PRG-003	Satellite Communications Upgrade	Space Force	FA8808-24-C-00...
4	PRG-004	Logistics Command Platform	Navy	N00024-24-C-55...
5	PRG-005	Next-Gen Radar Systems	Air Force	FA8730-24-C-00...

Promote headers before cleaning

Use the first CSV row as field names before filtering, selecting, or typing columns.

Keep data rows and remove the duplicate

1. Filter **Program ID** with **Text Filters** → **Begins With** → **PRG-**. This safely removes blank and notes rows even if the footer grows.
2. Select all columns and choose **Home** → **Remove Rows** → **Remove Duplicates**.
3. Confirm the query now contains **120 rows**.

Table.TransformColumnTypes(#"Promoted headers", {"Program ID", type text}, {"Program Name", type text})

Remove the repeated record

Select all columns before choosing Remove duplicates so only an exact duplicate is removed.

Trim and normalize text

1. Select Program ID, Program Name, Cost Center, Budget Category, Funding Source, Contract Number, and Status.

2. Choose **Transform** → **Format** → **Trim**.
3. Capitalize Each Word for Budget Category and Status.
4. In Budget Category, replace Sub-Contracts with Subcontracts.

The screenshot shows the Power Query Editor interface. The 'Transform' tab is active, and the 'Format' menu is open, displaying options like 'lowercase', 'UPPERCASE', 'Capitalize Each Word', 'Trim', and 'Clean'. The 'Trim' option is highlighted. In the background, a table is visible with columns 'Program ID' and 'Program Name'. The 'Queries' pane on the left lists 'Budget vs Actuals', 'Program', and 'Purchase Orders'.

Trim selected text columns

Ctrl-select the text columns, then use Transform → Format → Trim to remove leading and trailing spaces in one step.

The screenshot shows the Power Query Editor interface. The 'Transform' tab is active, and the 'Replace values' option is selected. The 'Queries' pane on the left lists 'Budget vs Actuals'. The background table shows columns 'Program ID', 'Program Name', 'Fiscal Year', and 'Quarter'.

Open Replace values

Select Budget Category, then choose Replace values.

Replace values

Replace one value with another in the selected columns.

	CC-5200	Labor				35.00
	CC-5200	Materials				-5.00
	CC-5200	Travel				13.30
	CC-5200	Subcontracts				-1.30
	CC-3300	Labor				1.60
	CC-3300	Materials				-9.10
	CC-3300	Travel				10.00
	CC-3300	Sub-Contracts				-34.50
	CC-3300	Labor				-3.20
	CC-3300	Materials				4.50

Inspect category values

Open the filter list to confirm which labels still represent the same category.

Inspect program-name variants

The source contains shortened and standardized names; the next step creates one governed value for each program.

Standardize program names with a conditional column

1. Select **Add column** → **Conditional column**.
2. Name the new column **ProgramName**.
3. Add the rule: if Program Name equals Next Gen Radar Systems, output Next-Gen Radar Systems.
4. Add an Else if rule: if Program Name equals Satellite Comm Upgrade, output Satellite Communications Upgrade.
5. For Else, choose the **Program Name** column so every already-valid name passes through unchanged.
6. Select OK and verify that ProgramName contains only the five governed names.

Open Conditional column

Use Add column → Conditional column to encode both name corrections in one auditable step.

Add conditional column ?

Add a conditional column that is computed from the other columns or values.

New column name *

ProgramName

Column name *

Program Name ▾

Operator *

equals ▾

Value ①

Next Gen Radar Systems

Then

Output ①

Next-Gen Radar Syste...

Else if

Program Name ▾

equals ▾

Satellite Comm Upgrade

Then

Satellite Communicati...

Add clause

Else ①

Program Name ▾

OK

Cancel

Define the correction rules

Return the standardized name for each known variant and use the original Program Name column as the Else output.

Replace the original name column

1. Right-click the original **Program Name** column and choose **Remove columns**.
2. Rename **ProgramName** to **Program Name**.
3. Set its data type to **Text**.
4. Open the filter list and confirm exactly five program names remain.

Remove the old column

Delete the inconsistent source column only after the conditional result has been verified.

The screenshot shows a data table with columns: Contract Number, Status, and Program Name. A modal dialog titled 'Filter by Program Name' is open. It contains a search bar with the text 'Satellite'. Below the search bar is a list of programs with checkboxes: (Select all), Cyber Defense Initiative, Logistics Command Platform, Next-Gen Radar Systems, Satellite Communications Upgrade, and Thunderbolt Sustainment Support. The 'OK' button is highlighted in green.

Contract Number	Status	Program Name
615-24-C-0043	On budget	Thunderbolt Sustainment Support
615-24-C-0043	On budget	Next-Gen Radar Systems
615-24-C-0043	On budget	Logistics Command Platform
615-24-C-0043	On budget	Cyber Defense Initiative
615-24-C-0043	On budget	Satellite Communications Upgrade
808-24-C-0043	Over budget	Satellite Communications Upgrade

1. In Actual Amount, Variance, and Variance %, replace N/A with an empty value.
2. Select Budgeted Amount, Actual Amount, and Variance.
3. Choose **Transform** → **Data Type** → **Using Locale**.
4. Use **Currency** and **English (United States)**. Parentheses must remain negative: (\$120,000) becomes -120000.

Convert the percentage correctly

1. Select Variance % and choose **Data Type** → **Using Locale**.
2. Use **Percentage** and **English (United States)**.
3. Verify 6.00% becomes 0.06, displayed as 6% after formatting.

Correction from the old guide: do not remove the percent sign and then convert to Decimal. That produces 6, which Power BI formats as 600%. Also do not strip parentheses without first preserving the negative sign.

Add a reporting period

1. Select **Add Column** → **Custom Column**.
2. Name it **Fiscal Period** and use [Fiscal Year] & " " & [Quarter].
3. This creates sortable labels such as FY2025 Q1 and FY2026 Q2 for the trend chart.

2. Purchase Orders

Deduplicate and trim

1. Select PO ID, then **Home** → **Remove Rows** → **Remove Duplicates**. Expect **20 rows**.
2. Select every text column and apply **Transform** → **Format** → **Trim**.

Clean amount and date types

1. In Amount Paid, replace NULL and - with 0.
2. Select PO Amount, Amount Paid, and Amount Remaining; use **Data Type** → **Using Locale** → **Currency** → **English (United States)**.
3. Select Order Date and Delivery Date; use **Data Type** → **Using Locale** → **Date** → **English (United States)**.
4. Check Column Quality. Do not replace date errors with null until you inspect the original value and confirm it is invalid.

Normalize business labels

1. Capitalize Each Word in PO Status and Priority.
2. Replace Apex Dynamics Corp. with Apex Dynamics Corp and Centurion Inc. with Centurion Inc.
3. Replace Satellite Comm Upgrade with Satellite Communications Upgrade.

3. Program

Protect the dimension key

1. Trim all four columns.
2. Set Program ID, Program Name, Branch, and Contract Number to **Text**.
3. Confirm Program ID is unique: 5 rows and 5 distinct values.

Modeling rule: use **Program[Program Name]** in slicers and axes. The fact-table names were intentionally inconsistent; the dimension is the governed label.

Validate before loading

1. Set Column Profiling to the entire dataset.
2. Confirm amount columns show numeric distributions, not text values.
3. Confirm Variance % is Percentage and dates are Date.
4. Select **Home** → **Close & Apply**.

Build the star schema

1. Open **Model view**.
2. Relate **Program[Program ID]** to **Budget vs Actuals[Program ID]**.
3. Relate **Program[Program ID]** to **Purchase Orders[Program ID]**.
4. For both relationships use **One-to-many (1:*)**, **Single** cross-filter direction, and make the relationship active.
5. Hide Program Name in both fact tables to steer report authors toward the Program dimension.

Single-direction filters flow from Program to both facts. This lets one Program slicer filter budget and procurement without ambiguous loops.
